

Kokkola December 13, 2022

To whom it may concern,

We are pleased to announce that the Responsible Minerals Initiatives (RMI) has renewed Jervois Finland Oy's status as a conformant downstream facility as determined by RMI's Downstream Assessment Program.¹ Jervois Finland Oy was the first cobalt chemical producer in the world to receive such recognition by the RMI in 2020.

RMI developed the Downstream Assessment Program (DAP) as a mechanism by which downstream companies, within the cobalt or tin, tantalum, tungsten, gold (3TG) supply chains, can obtain independent validation that their responsible sourcing practices are aligned to OECD Due Diligence Guidance for Responsible Mineral Supply Chains from Conflict-Affected and High-Risk Areas (OECD Guidance).² This program is solely for downstream companies that do not meet the definition as a refiner or smelter.

RMI's recognition of Jervois Finland is validation that our cobalt sourcing and due diligence activities are aligned with OECD Guidance. Our customers can comfortably rely on RMI's recognition that our products are responsibly sourced. In fact, our conformance provides an opportunity for our customers to continue the chain of responsibility throughout the downstream to the end finished product.

Please see our website at <http://www.jervoisfinland.com/sustainability> for further information regarding Jervois Finland's activities on sustainability.

Sami Kallioinen
President & Managing Director
Jervois Finland Oy
